

al challenge which is physically and psychically demanding upon the care-givers. The rewards are not always reaped by the providers and the turns of events may as readily be demoralizing as exhilarating. Participation within a team helps the individual to navigate the rough water a bit more steadily. Even if teamwork did not enhance the thoughtfulness brought to bear on the care of a patient, even if teaming did not synergize the psychic rewards of rendering care, surely it would add the consolations given to one team member by another as the vagaries of professional and personal life make their daily demands.

It has been exciting to watch our understanding of the therapeutic process grow along with BIAC's growth. It is even more exciting to contemplate what remains to be discovered about the processes of diagnosis and treatment and how these future insights will be applied in the care of our patients.
